#### INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.

PCT/US00/15810

٧.	Reasoned statement under Article 35	5(2) with regard	to novelty,	inventive step or	industrial	applicability;
	citations and explanations supporting	g such statemen	t			•
		***************************************				

#### 1. statement

Novelty (N)	Claims	1-127	YES
,	Claims	NONE	NO NO
Inventive Step (IS)	Claims	1-127	YES
	Claims	NONE	NO NO
L. J. dariel Ameliachility (IA)	Claims	1-127	YES
Industrial Applicability (IA)	Claims	NONE	NO NO

#### 2. citations and explanations (Rule 70.7)

Claims 1-127 meet the criteria set out in PCT Article 53(2)-(4), because the prior art does not teach or fairly suggest that set forth in independent claims 1 and 20, namely a method for targeting advertisements to subscribers in an electronic book distribution system in which an electronic book having advertising spot locations is provided with one or more advertisement spots for each of the locations in accordance with a spot retrieval plan. The prior art further fails to teach or fairly suggest that set forth in independent claim 30, namely a method for targeting advertisements to subscribers in an electronic book distribution system in which a package of targeted advertisements, a group assignment matrix, and a retrieval plan are provided to book terminals and stored in memory, one or more electronic books with spot locations are provided to the terminals, and a comparison is made with the group assignment matrix and the retrieval plan to determine advertisements to display in particular spot locations. The prior art further fails to teach or fairly suggest that set forth in independent claim 35, namely a method for assigning targeted advertisements to multiple spot locations in an electronic book delivery system in which targeted advertisements are assigned to successive spot locations based on rankings dictated by the groups of viewers associated with target categories of targeted advertisements. The prior art further fails to teach or fairly suggest that set forth in independent claim 37, namely a method for targeting advertising to at least one subscriber in an electronic book order and distribution system in which data associated with the electronic books which have been read is analyzed and correlated to advertisement categories for the purpose of transmitting advertisements to subscribers. The prior art further fails to teach or fairly suggest that set forth in independent claim 54, namely a method for targeting advertisements to a plurality of electronic books in which a primary and an alternate advertisement are assigned to a book from a package of advertisements, and in which each viewer is assigned to a group to create a group assignment matrix such that a retrieval plan is generated instructing viewers to select an advertisement from memory for display based on the group (Continued on Supplemental Sheet.)

Sheet 10

V. 2. REASONED STATEMENTS - CITATIONS AND EXPLANATIONS (Continued): assignment. The prior art further fails to teach or fairly suggest that set forth in independent claim 58, namely a system that targets advertisements to electronic books comprising an electronic book database, an advertisement database, a retrieval plan generator, a group assignment engine, and memories within the respective terminals from which retrieval plans are retrieved for dictating the display of advertisements. The prior art further fails to teach or fairly suggest that set forth in independent claim 62, namely a targeted advertisement management system comprising a server that receives requests for electronic books and provides the books for delivery to terminals, a subscriber collection engine that obtains subscriber data and generates profiles, a subscriber information database for storing the profiles, a configuration set up system to group terminals according to profiles, and an advertisement generation system and a retrieval plan generator for generating and retrieving a plan for the display of particular advertisements. The prior art further fails to teach or fairly suggest that set forth in independent claims 82 and 121, namely a method for targeting advertisements in an electronic book by identifying electronic book subscribers, defining advertising spots in the book, and assigning advertisements to the spots based on the identity of the subscriber. The prior art further fails to teach or fairly suggest that set forth in independent claim 123, namely a method for assigning targeted advertisements to multiple spot locations in an electronic book delivery menu system in which plural spots are identified, targeted advertisements are assigned to categories which are divided into groups of users, spot locations are ranked based on target categories and/or a percentage of total viewers in each group, and advertisements are assigned to the locations. The prior art further fails to teach or fairly suggest that set forth in independent claim 127, namely an apparatus that targets advertisements to subscribers in an electronic book distribution system first and second databases for books and book menu data, respectively, and a processor that determines advertisement spots and assigns advertisements based on the identity of the

As for the prior art, the Hendricks et al (5,600,573) reference does not make reference to an electronic book subscriber. distribution other than to make reference to a later published related application, and fails to teach or suggest advertising within the electronic book distribution system environment.

Further, the Fernandez (4,855,725) reference discloses electronic books, however within the personal computer as opposed to the distribution system environment. The reference also fails to teach or suggest advertisements within electronic books, whether targeted or otherwise.
